TERRABOND[®] SPREADER/GRADER[™] = THE ORIGINAL

Sure the technology for multi-blade, skid style road grading equipment has been around for over 25 years, we should know because TerraBond Spreader Grader is the "original" design from the inventor this revolutionary grader design.

As history goes, on a dusty gravel road in southern Mississippi about 25 years ago an experienced and seasoned motor grader operator came up with an innovative idea. His idea was to build a lightweight yet powerful grader unit as an alternative to a motor grader. The original unit proved to be able to grade a road faster and more effectively than his motorized grader. This idea revolutionized

road grading and fostered a multi-generation of innovation in road grading equipment design. The uniqueness of the original and later designs demonstrated how it was much better than any other road grading implement ever invented. Its unique design was awarded several U.S. and foreign patents. This legacy sets the TerraBond Spreader Grader[™] and VersaPro[™] units apart as the "original" manufacturer and supplier of multi-blade, skid grader units. The TerraBond Spreader Grader[™] deliver great results and an easily recognized value to its owners. Consider the "original" multi-blade, skid style road grading implement when making your next road grading

equipment purchase.
